

Congratulations to Shadeliving Centre Pole Barrel Arch

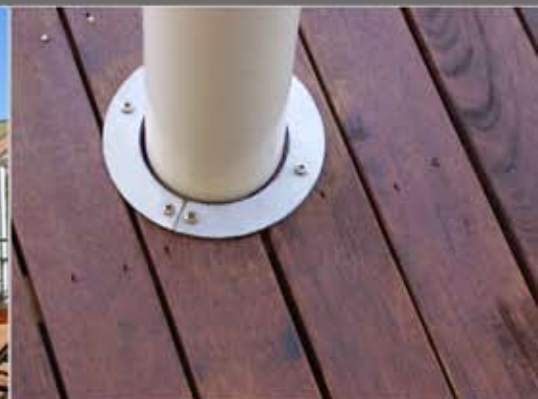

Structureflex was recently approached by a Melbourne based company Shadeliving to design, engineer and manufacture a water proof shade structure.

The final design was a barrel arch structure spanning 23 metres and extending 4 metres out from the building with supporting posts positioned along the new deck. The hot dipped galvanized steel frame was covered in an architectural grade PVC fabric to provide both sun and weather protection. The resulting structure has produced a large protected area to cater for both recent smoking legislation and outdoor dining.

These structures present benefits for sporting club members and enable the installer to maximize their time use and profit. Call Structureflex today to learn more about our custom structures.

How can we help you?

Services available:

3D design, Engineering, 3D shadow analysis, 3D renders, custom fabrication, PVC & shade cloth patterning, Computer cutting and Fabrication.

Structureflex Products:

Umbrellas, Carpark structures, Walkway structures, Shade structures PVC & shade sail fabrication
