

Structureflex Pacific

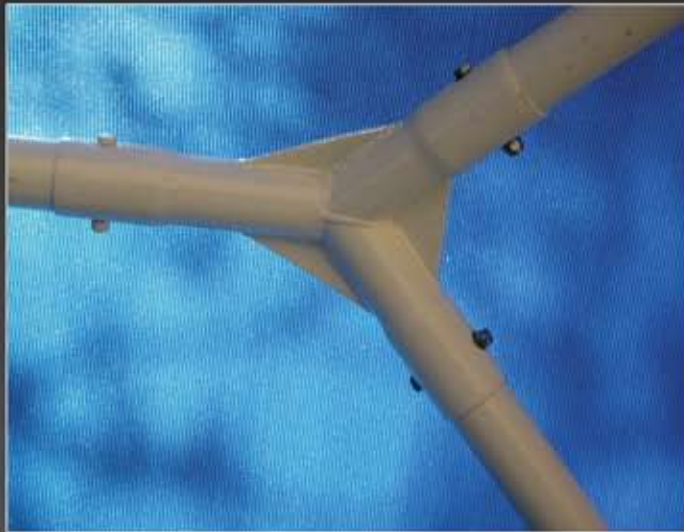

Structureflex supplies premium products and services to shade and building professionals worldwide. As a brand Structureflex is committed to delivering quality products through investment in specialized staff and technology.

Attributes

Framed Shade Structures provide low perimeter height combined with high centre clearance which is ideally suited for shading play equipment and sand pits as they offer superior and efficient shade performance compared to shade sails.

Design & Engineering

Structureflex have developed a software suite which enables each structure to be individually engineered to meet site specific conditions in accordance with the building code. This is a superior approach compared to other products which are generically pre-engineered and typically results in our structures being manufactured using larger and stronger steel members.

Other unique features of the Structureflex design are fully reinforced and gusseted joints and a superior membrane tensioning system. Our membranes are computer patterned and cut which combined with the superior tension system, ensures a perfectly taught skin overcoming the sagging and flapping typically experienced in other manufacturer's products. This ensures the safety and longevity as well as the aesthetic value of your investment.

Features:

- Available in sizes up to 120m²
- Available in shadecloth or waterproof architectural grade PVC
- Shapes include rectangular, square and hexagonal
- Available with wind ratings of: 30m/s, 35m/s, 40m/s, or 45m/s (Selection criteria dependant on site conditions & requirements)
- All joints fully reinforced/ gusseted
- Membranes computer patterned and cut
- Hot dipped galvanized steel
- Superior fabric tension system using stainless steel fittings
- Site specific engineering certification available.

Reduce Costs

Reduce project costs and environmental impact. The Structureflex Framed Shade Structure Kit enables Agents to source columns and rafters from local steel suppliers reducing transport time, emissions and lowering overall project costs.

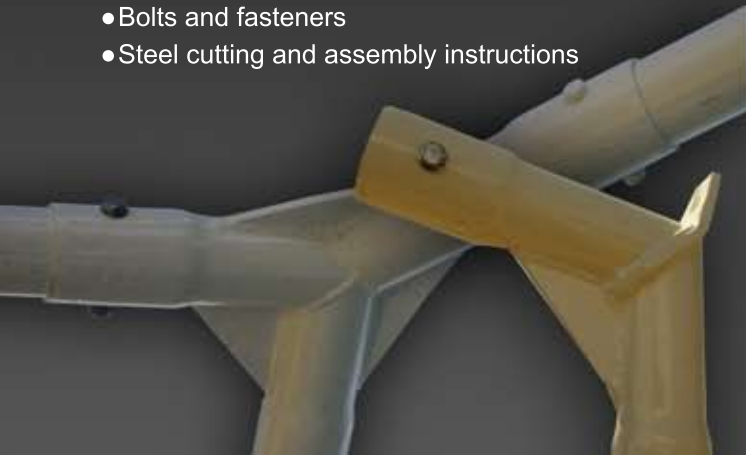

Specifications

Hip & Ridge Kit Description		Size
Rectangular Hip & Ridge		<p>Up to 120m² coverage 2.3m to 3.4m entry heights</p> <p>Wind Ratings: 30m/s 35m/s 40m/s 45m/s</p>
Square Hip & Ridge		
Hexagonal Hip & Ridge		

Components:

Framed Shade Structures Kits comprise the following components:

- Elbow Joints
- Y-pieces (for rectangular shapes) or Hubs (for square and hex shapes)
- Skin Kit (including tension fittings)
- Bolts and fasteners
- Steel cutting and assembly instructions

Guarantee

For your complete confidence, our structures are backed by a three year warranty against manufacturing defects. Additionally, the fabric is warranted by the fabric manufacturer for 5 years for PVC (pro-rated), 10 years for PVDF coated PVC (pro-rated) and 10 years for shade cloth (UV degradation).
